Abstract (en)

[origin: EP0976554A1] A vacuum gripper (4) in the back part of the back edge (6) of the sheets is placed on the sheets (1). During transfer of the sheets, the suction gripper follows the periphery of the cylinder (2) belonging to the rotary sheet-fed printer. The vacuum gripper is guided into the periphery of the turning drum (3) at a constant tangent, and performs a relative movement towards the tangent. When the vacuum gripper has reached the t transfer position on the gripper system (25) it executes a relative movement towards the sheet-feed direction.
