Abstract (en)

The suspension device (1) has a first open-edge recess (3) for part of a suspension rail, a first nose (7) fitting in this recess with a root (9) to receive a suspension rail element of a suspension rail (50), a second nose (10) in the same recess with a root (11) also for a hanging rail element. The second nose has a support sector (21, 22) to take a further suspension rail element. There is a second open-edge recess (27) spaced out from the first one to receive yet another suspension rail element.
