Abstract (en)

A safety device is described for the forced execution and the control of the gripping of a car onto a cable before its exit from a station for single cable cableway. The safety device comprises a plurality of mechanical guides (22, 23, 24, 26) inserted along the path that is run by a gripping vice (8) of the car inside the station in order to force the same vice (8) to close itself again on the cable (1) before the exit of the car from the station. <IMAGE>
