Abstract (en)
[origin: EP0976673A2] The feeder (14) takes two stacks (24,26) of flat products (24a,26a). A separator for each stack conveys one of the flat products from the first and second stacks to the transporter (10). Both separators in the form of rotors comprise mechanisms enabling the flat products to be conveyed in such a way that the flat products (22a,24a) are alternately deposited .
