Abstract (en)
[origin: EP0976903A1] The module includes a bearing support (5) attached to a first arm section (14) of a spring-loaded rocker arm joined to the rod (17) that connects the handle to the lock (16). The bearing support is movably mounted in a bearing guide (6) and can be moved in the bearing length axis (7) direction in order to secure the rocker arm to the rod. A calibrating screw (8) laterally mounted in the bearing is used to slide the support into position.
