Abstract (en)
[origin: EP0977323A2] An assembly which includes a jack (10) having an insulative housing with first and second longitudinal walls positioned such that said second longitudinal wall is positioned over said first longitudinal wall in spaced parallel relation. At least one lateral wall (16, 18) is interposed between said first and second longitudinal wall. The jack is positioned such that the PCB (52) is interposed between said first and second longitudinal wall. The first planar surface of the PCB (52) faces the first longitudinal wall to form a first section of the jack (10), and the second planar surface of the PCB (52) faces the second longitudinal wall to form a second section of the jack (10). Conductive terminals extend from the jack (10) in said second section. An LED (48, 50) is located in the first section of the jack (10) so that it does not interfere with signals passing through the conductive terminals. <IMAGE>
