Abstract (en)
[origin: WO9849407A1] A process and device are disclosed for building a body of masonry with prefabricated building elements supplied to the building site (10a-10i) and used to build a formwork (S) that can be filled with a setting mass. Also disclosed are simple, easy-to-use, prefabricated building elements which can be used to build the formwork and as integral parts of the body of masonry. The formwork is provided in a special manner with a filling which sets very quickly and forms a highly resistant body of masonry in a single piece.
