Abstract (en)
[origin: WO9750048A1] An arrangement for filing or retrieving data in at least one data source which can be coupled to at least one external file storage system via data transmission means, in which at least one long-distance or very-long-distance network and interfaces connected thereto from different places are used as data transmission means, via which a plurality of spatially or geographically separated data sources and/or different local networks with one or more data sources can be connected to the file storage system(s), and the file storage system has mutually separable storage fields (1, 2, ..., k-1, k), which are allocated to one of the spatially separated data sources or local networks.
