Abstract (en)

[origin: WO9944353A1] Method for entrance telephone communication utilizing public subscriber telephone networks, in which at least part of the subscribers connected to the entrance telephone system are arranged having a telecommunication subscription facilitating that the subscriber is billed for received and switched through entrance telephone calls, preferably with the charges shown in the conventional telephone bill and/or with at least the call charges paid by sponsor/advertiser. Calling operations from the entrance telephone set are according to a first embodiment performed with a prefix indicating call of the type "called party pays" with the entrance telephone set accepted for initiation of such calls. According to an alternative embodiment subscribers connected to the entrance telephone system are treated as "020-subscribers" with regard to call charges for calls from the entrance telephone set, and according to a further alternative embodiment subscribers connected to the entrance telephone system are given a secondary telephone member for entrance telephone calls on which the call charges are debited for calls from the entrance telephone set, and according to a further alternative embodiment a sponsor/advertiser is given an opportunity to pass on a message to visitors when calling, and to pay for this service at least the call charges. The call is preferably charged only after acceptance of the call from the called party, e.g. by dialling "1", and with disconnection, preferably without any call charge, if the called party does not accept the call, e.g. by dialling the digit "2".
