Abstract (en)
[origin: WO9943400A1] A roller skate comprising an elongated frame with a connection side and a rolling side opposite to the connection side, a plurality of wheels rotatably mounted to said frame to extend radially from said rolling side, a footwear element mounted to said frame to accommodate a skater's foot, said footwear element being provided with a sole and, on a first side, with a first lateral element and, on the opposite side, with a second lateral element, said elements comprising a housing adapted to engage corresponding lateral wings extending laterally from said connection side of the frame, said second element being removable. The housing of the first element is comprised of a slot.
