Abstract (en)

[origin: FR2762811A1] The invention concerns a system comprising an expansible articulated mechanism (42) with levers (46) the top ends (56) of which shaped like hooks are capable of co-operating with inner portions (36) opposite a U-shaped rail (26) top edges (32) for locking one support (24) vertically relative to the rail (26) and blocking it longitudinally relative thereto in an adjusted position wherein the hooks are received in notches (40) of the rail (26) top edges (32).
