Abstract (en)
[origin: GB2306538A] A finger guard comprises a cover 4 for the gap at the hinge side of a door 1 and door frame 3 combination. The cover 4 is a strip of a rigid material which is flexible about its minor axis, the strip having attachment means at its long edges, preferably adhesive, whereby each edge may be secured respectively to the door 1 and door frame 3. The strip may include at least one longitudinally-directed hinge 8 and the attachment means may allow some vertical movement for a door with rising-butt type of hinges by providing a T-shaped member 14 secured in the channel of housing 16. The cover 4 is preferably of plastic or fibrous or fluted board.
