Abstract (en)

[origin: EP0979765A2] The transmission method allows a count value to be transmitted from a count point (ZP1-ZP3) to a central evaluation device (AWE), for providing a track free or track occupied indication for a railway track section, using an existing communication network, e.g. a mobile communications network (MSC,BTS). The communication link between the count point and the central evaluation device is established after a given delay from the passage of the last wheel axle of the train. An Independent claim for an electronic termination box for a count point is also included.
