Abstract (en)  
[origin: EP0980084A1] The switch combination has an electric rocker switch which can be pivoted from a middle position to two switch positions and which automatically returns to its middle position. It also includes an electric slider switch which can take up two switch positions. The slider switch actuator (3) is in opposing dependence on that (1) of the rocker switch. The actuator of the slider switch in at least one of its switch positions mechanically blocks the actuator of the rocker switch in its middle position.
