Abstract (en)

[origin: WO9848686A1] The system comprises motorized cylindrical rotating brushes (13A, 13B; 15A, 15B) on horizontal axes. At least two of said brushes are mounted cantilever-fashion and project laterally as far as the opposite sides of the machine in order to enable the free ends of these brushes on both sides of the machine to be placed laterally against walls delimiting the surface to be cleaned.
