Abstract (en)
[origin: US6564949B1] A holder (1) for hand-held power-operated, specially rod or pistol shaped devices such as pneumatic screwdrivers and the like, comprising two retaining jaws (3) which are arranged on a common support rail (2) and can be fixed at a variable distance from each other. A bearing surface oriented towards the support rail (2) is allocated to the retaining jaws (3). The retaining jaws (3) can be rotated around an axis running at an approximate right angle throughout the bearing surface and can be fixed in at least two angle positions. The retaining jaws (3) have a first recess (7) which can be directed towards the device to receive and hold the device. The retaining jaws (3) can be fixed at a varying orientation to the support. The retaining jaws (3) and the bearing surface form a common component. The retaining jaws (3) have a second recess (7, 9, 10). The recesses are arranged around the axis in the peripheral surfaces of the retaining jaws (3). An additional recess (11) accommodating the actuating lever (8) of the device to be held is provided in at least one recess (10).
