Abstract (en)

[origin: WO9850666A1] The invention relates to a window/door for a building having a burglar alarm (11, 111) fitted between the window frame/door frame (1) and the window casement/door leaf (2) which emits an alarm signal. The invention is characterized in that the burglar alarm has a detection zone along the beams of frame, by means of which the penetration of a break-in tool (10) into the first partition line (9) between the window/door frame and the window casement/door leaf is turned into an alarm signal.
