Abstract (en)

[origin: EP0980949A2] The anchor device comprises a first pocket-like holder (16) on the door frame rail (2) for fixing a hinge plate (15) of the hinge (8) whilst a second holder (19) fixable next to the first on the door frame rail is used to additionally hold the hinge plate so that the hinge plate cannot be distorted or swivelled by the weight of a heavy door (3). The first pocket-like holder is mounted on an inner off-set area of the door frame rail in a rebate. The second holder and hinge plate engage between the pocket holder and the swivel axis (A),
