Abstract (en)  
[origin: EP0980953A1] The container has multi-layer walls (14) to protect the interior against penetration. Each wall has at least a light metal honeycomb core (26,36), flanked by sandwich covering layers (28,32,38,42). The gap between the covering layers is greater than the penetration depth of manual power tool with a rotating cutting disk or circular saw. At least one covering layer is of aramide fibers in three layers, with a thermoplastic core (30,40) between the aramid fiber sheets. The layer of aramid fibers is coated with rubber on at least one side.
