Abstract (en)

[origin: EP0981016A1] A fuel injection device (7) is provided in the direction of the air inlet current (6) in front of the tangential air inlet slits (1) to inject the fuel in a parallel flow direction to the air inlet current into the air inlet slit. The injection device injects the fuel isokinetically relative to the combustion inlet air. The individual injection devices for each air inlet slit are connected together through a cohesive frame formed as a module fixable on the burner.
