Abstract (en)
[origin: EP0981030A2] The collector (7) has a distribution section (8) provided with outflow apertures (12) for condensate water dripped from the evaporator. A second distribution section (9) also has outflow apertures (15,16) and a cover. It is filled with condensate water with the aid of a conveyor device, this water having been collected under the condenser. The second distribution section contains at least two areas (13,14), in which the sum of the opening expansion of the outflow apertures is different.
