Abstract (en)

[origin: WO9852457A1] The invention relates to a reuseable universal vacuum cleaner bag which is both economical and time-saving. The user places a cardboard template on the polyesterol panel (1) so that the holes match each other, marks the edges of the card on the panel with a pencil and cuts the resulting shape out of the polyesterol panel (1) using scissors. The opening required in the frieze-cloth seals (5 or 6) on the vacuum cleaner bag (8) must be cut out crosswise with scissors. Only one of said frieze-cloth seals (5 or 6) should be opened. The adhesive seal (12) is joined to the frieze-cloth seal (10) by means of rolling up the bag end, thus closing the bag. The bag is emptied by performing the same process in reverse. In the event that the bag is too long, it can be shortened using the frieze-cloth-adhesive seals, since the motor aspiration system must be kept free. The adhesive seal (3) on the holding panel is pushed together with the opened frieze-cloth seal (5 or 6), and the bag is ready for use.
