Abstract (en)

[origin: WO9843582A1] A method of manufacturing a compound sanitary napkin (20) comprising a primary absorbent member (30) and a base member (50) is provided. The primary absorbent member (30) extends in a longitudinal direction, comprises a primary absorbent element and a fluid pervious cover superimposed on the primary absorbent element, and superimposes on the base member. The method comprises the steps of: wrapping the primary absorbent element by the fluid pervious cover to make the primary absorbent member (30), the primary absorbent element arranged to provide a first predetermined interval, forwarding the primary absorbent member (30), toward a combining section, feeding the base member (50) toward the combining section, applying a union means to at least one of the primary absorbent member (30) and the base member (50) along at least a part of the longitudinal direction to affix the primary absorbent member (30) and the base member (50), and combining the primary absorbent member (30) and the base member (50) by applying at least pressure at the interval.
