Abstract (en)

[origin: DE19721213A1] The invention relates to a method for cleaning guide rollers, according to which a strip of material (1) is provided with retrievable single or multitrack signal information (6, 7). Said information is subsequently used by reading (33) devices to start both a device (19) which applies cleaning agents and a device (28) connected to one of the guide rollers in order to produce a differential speed.
