Abstract (en)

[origin: US2003053889A1] The invention is directed to a method and a device for the production of security elements for electronic article surveillance, said security elements being comprised of at least two layers, as well as to a web material manufactured by means of said method. The object of the invention is to propose a simple, economical method, a corresponding device for the production of web material, as well as a web material manufactured by said method for the purposes of electronic article surveillance. The object of the invention with regard to the method is accomplished in that sections (6) of a predetermined length cut from a second material web (2) are conveyed in a direction transverse to the running direction (x) of a first continuous material web (1) and are applied to said first material web (1).
