Abstract (en)

[origin: WO9850897A1] The invention relates to a method for supplying and/or sealing security elements (2) for electronic goods protection, and a corresponding security element (2). The aim of the invention is to provide a method for supplying and/or sealing security elements (2), and a corresponding security element (2) which is especially suitable for attachment to goods at the source. To this end, the security elements (2) are fixed on a conveyor belt (1) in any arrangement by means of an adhesive layer, the adhesive strength exerted by the adhesive (4) on the conveyor belt (1) being greater than the adhesive strength exerted on the security elements (2). The conveyor belt is carried to a processing or supplying station where the security elements (2) are then lifted off of the conveyor belt (1) and attached to a good requiring protection or made ready for further processing.
