Abstract (en)

[origin: WO9946935A2] In a method of processing input image and/or data signals (R_i, G_i, B_i) having an input frequency (H_i) and a number of active input lines, the input image and/or data signals (R_i, G_i, B_i) are written into a buffer (LM-R, LM-G, LM-B) at the input frequency (H_i), and output image and/or data signals (R_o, G_o, B_o) are read from the buffer (LM-R, LM-G, LM-B) at an output frequency (H_o) other than the input frequency (H_i) thereby ensuring that the output image and/or data signals (R_o, G_o, B_o) have a number of active output lines other than the number of active input lines.
