Abstract (en)  
[origin: EP0981988A2] Curtain is suspended from a guide rail (2) fastened to a building wall or ceiling by an arrangement of sliders (3), each having a head (4) which clips into a channel (15) in the side wall of the rail and a foot (5) for attaching the curtain. The slider can be removed from the rail by making the head smaller by pressure on the foot. Preferably, the head has two guide grooves (10, 11) in which the edges of the guide rail fit. It has a recess (9) extending horizontally at its centre to allow the head to be compressed.
