Abstract (en)

[origin: WO0007294A1] A bath and shower device comprises a bath-tub (1) associated with a shower partition (4) mounted on a wall (2) above the upper rim (3) of the bath-tub (1). The base (5) of the bath-tub (1) has a flat stable surface (6). The shower partition (4) consists of several hingedly connected segments (7) which are pivotally fastened to the wall (2) and which can be swivelled from a deployed position in which they form a shower recess to a collapsed resting position against the wall (2) which uncovers the bath-tub (1), and vice versa. The bath and shower device offers improved shower facilities and improved safety, because the stable surface (6) of the bath-tub (1) is arranged in the longitudinal direction of the bath-tub (1) in approximately the centre of the base (5).
