Abstract (en)

[origin: EP0982053A1] The holder (1) has at least two parallel U-shaped rails (3) opening upwards. The free ends (10) of the sides of the rails support the roller holders (8) of the roller skate (2). The rollers (7) fit into the space (6) vertically apart from the rails which are held by at least one connection (12). The connection covers at least one end side (11) of the profiled rails and has mountings (13) for fixing the holder to the wall. The distance (D) between the centres of each profiled rail at least corresponds to the width of a roller skate.
