Abstract (en)

The invention relates to an arrangement in load-carrying vehicles (1) comprising a loading space (2) defining an opening that can be closed off substantially completely by a hood (3), a power device (5) for opening and closing the hood (3) and a locking device (11,13) arranged for sealed locking of the hood (3) against said space (2). The invention is characterised in that the locking device (11,13) comprises a substantially vertically arranged and displaceable element (11) which is arranged in the loading space (2), and a locking clamp (13) arranged in the hood (3), said power device (5) being adapted to displace said element (11) through said locking clamp (13) when locking the hood (3). By means of the invention, a locking device is provided, especially suitable for locking a tailgate (3) against a refuse container (2) of a refuse collection vehicle (1). <IMAGE>
