Abstract (en)
[origin: WO9737893A1] An inner lid tube (4), which is secured inside a mouth tube (7) of a liquid container (6) with a squirt (8) is comprised of a squeezer (2) shaped like a spiral slope around nearly the whole inner surface thereof. The squeezer (2) is provided intermittently with a slit (S), and it is also provided with a little space (G) which prevents that the top edge and the bottom edge of the squeezer (2) do not pile up in the vertical direction, so that a liquid stuck around the squirt (8) can be smoothly squeezed and returns into the container (6), and that the inner lid (1) can be easily drawn from the mold. The liquid container is preferably employed for cosmetic products.
