Abstract (en)
[origin: WO9846622A1] A novel growth factor receptor, TrnR2, is disclosed and the human and mouse amino acid sequences are identified. Human and mouse TrnR2 cDNA sequences have been cloned and sequenced. Subcloning the cDNA sequences into vectors and the preparation of cells stably transformed with the vectors are also disclosed. In addition, methods for treating degenerative conditions as well as conditions involving excess levels of GDNF or NTN, and methods for detecting and monitoring TrnR2 levels in patients are provided. Methods for identifying additional members of the TrnR family of growth factor receptors are also provided.
