Abstract (en)

[origin: FR2776327A1] The key has a flat elongated body fitting into a channel (8) in the lock rotor (4) and incorporates a mobile pusher (32) capable of performing a limited transverse movement to engage with a positioner. The pusher also has one or more shaped lateral surfaces (40, 41) to interact with mobile rotor pins (119) passing through apertures (34) in the body of the key and position the pins so the rotor can be turned inside the lock stator (7).
