Abstract (en)

[origin: DE19722898A1] The invention relates to a device for the remote-control monitoring and influencing of an electronic overcurrent trip of a circuit breaker. Said device comprises an interface (S1, S2, Sn) for emitting status messages and receiving control commands as well as a transmission line which forms part of a network (NW1, NW2) linking data processing units (PC1, PC2). The interface (S1, S2, Sn) of the overcurrent trip (U1, U2, Un) is configured in an HTML format for the exchange of data in accordance with the TCP/IP protocol series.
