Abstract (en)

[origin: DE19811733A1] The arrangement arranges components on a circuit board in a first group and a second group. The first group comprises radially wired components (1) e.g. components with terminal wires. These wires are arranged exclusively on one side of the component body (9). The second group contains axially wired components (2) i.e. elongate component bodies with two terminals. The elongate body defines a longitudinal axis of the component. One terminal is arranged on each side. At least one component of the second group is arranged under at least one component of the first group directly next to the terminal wires of the component of the first group.
