Abstract (en)
[origin: EP0983825A2] The head brush (1) has a number of grinding bristle clusters (10,11) held as trimming material (3) in a baseplate (2) so that their other ends form the trimming surface (4) of the brush. The trimming surfaces is shaped. Its shaping deviates from a constant straight line (L). At least some of the bristle clusters project at an angle from the baseplate. Their angle is between (5 degrees ,30 degrees) from a theoretical axis (X) projecting orthogonally from the plane of the baseplate.
