Abstract (en)

[origin: EP0984092A1] Washing machine features an evaluator circuit (A) integrated into the program control. Circuit (A) detects foam formation in the washing solution container (1) or drum (2). The detection is based on the size of the signal fluctuations in the signals generated by a sensor (11) in accordance with the washing weight or the acceleration of the container (1). Washing machine features an evaluator circuit (A) integrated into the program control which influences course the washing program.
