Abstract (en)

The present invention relates to slotted shims (38) for machinery for spacing apart a machine base (114) and a support for the machine (116), the shims (38) being adapted to receive in their slots (40, 42), machine-securing bolts (122) and the like, extending between the base (114) and the support (116). The present invention provides a multiple slot shim (38). <IMAGE> <IMAGE>
