Abstract (en)  
[origin: WO9855094A1] The present invention relates to an antimicrobial wipe comprising a porous or absorbent sheet impregnated with an antimicrobial cleansing composition, wherein the antimicrobial cleansing composition comprises from 1.001 % to 5.0 % by weight of the antimicrobial cleansing composition, of an antimicrobial active; from 0.05 % to 10 % by weight of the antimicrobial cleansing composition, of an anionic surfactant; from 0.1 % to 10 %, by weight of the antimicrobial cleansing composition, of a proton donating agent; and from 3 % to 99.85 %, by weight of the antimicrobial cleansing composition, water; wherein the composition is adjusted to a pH of from 3.0 to 6.0; wherein the antimicrobial cleansing composition has a Gram Positive Residual Effectiveness Index of greater than 0.5; and wherein the antimicrobial cleansing composition has a Mildness Index of less than 0.3. The present invention also relates to an antimicrobial wipe impregnated with an antimicrobial cleansing composition which has a Gram Positive Residual Effectiveness Index of greater than 0.5. It also relates to an antimicrobial wipe impregnated with an antimicrobial cleansing composition which has a One-wash Immediate Germ Reduction Index of greater than 1.3. The invention also encompasses methods for cleansing skin and providing residual effectiveness versus Gram positive bacteria using these products.
