Abstract (en)
[origin: GB2323848A] A detergent composition or particle comprises a surfactant component, preferably comprising an anionic sulphonate surfactant, and a hydrotrope. The viscosity of the surfactant component in water is reduced. The detergent particle for use in detergent compositions, comprises an anionic sulphonate surfactant, present at a level of from 0.01% to 20% by weight of the particle, and a hydrotrope, present at a level of from 0.01% to 45.0% by weight of the particle, wherein of from 0.0% to 30% by weight of the particle of a phosphate component is present. The hydrotrope may be sodium toluene sulphonate.
