Abstract (en)
[origin: WO9854283A1] Disintegration problems of detergent and cleaning agent shaped bodies containing an effervescent agent can be solved by additionally applying a water-insoluble disintegration adjuvant which is capable of swelling to said shaped bodies. The shaped bodies consist of a densified particle-shaped detergent and cleaning agent composition and contain 1-10 wt. % of a water-insoluble disintegration adjuvant which is capable of swelling, in addition to 3-60 wt. % of a gas-generating effervescent system.
