Abstract (en)
[origin: WO9854287A1] Particulate phosphate-built detergent compositions having a surfactant content of at least 15 % by weight, preferably at least 25 % by weight and more preferably at least 30 % by weight, are composed of at least two different granular components: (i) a base powder comprising sodium tripolyphosphate and optionally zeolite, the ratio of sodium tripolyphosphate to any zeolite present being at least 5:1, and (ii) at least 10 % by weight of high-active granules containing at least 60 % by weight of surfactant, and preferably at least 60 % by weight of anionic surfactant. The compositions have excellent flow properties despite the high surfactant content.
