Abstract (en)

[origin: DE19722349A1] The invention relates to an angular profiled shape (3) designed to be glued to a surface for finishing the edges of set ceramic tiles (5, 6) or similar items. Said profiled shape comprises a first perforated leg (31) and a second leg (33) joined to the first leg at an angle. On said second leg distancing means are embodied pointing in the direction of the adjoining ceramic tile (5, 6) which determine the visible joint width (B) between the outer leg (35) and said adjoining ceramic tile (5, 6). To this end, a chamber open only to one side is embodied, together with the thickened area (34) forming the distancing means (36), at the free end of the leg (35) in the direction of the side of the ceramic tile whose edge is to be finished.
