Abstract (en)

[origin: FR2763980A1] The invention concerns a tumbler lock with additional rotor locking member comprising a rotor (2) rotating in a stator (1) bore. The invention is characterised in that the lock comprises a slide (4) movable transversely to the key channel, said slide (4) comprising a key passage orifice (41) and a projection (42) co-operating with a stator (1) housing (11) in a position locking the rotor (2) rotation and elastically returned in said locking position by elastic return means (5), said slide (4) having at least a notch co-operating with a key member so as to drive said slide transversely towards a position unlocking the rotor (2) rotation. The invention is applicable to tumbler lock.
