Abstract (en)

[origin: WO9854680A1] The invention relates to a system for supervising electromagnetically protected items in n supervision zones ($n \geq 2$). Each of the n supervision zones is defined by two transmitting/receiving devices which are arranged on both sides of the zone. Each transmitting device has at least one transmitting reel and each receiving device has m receiving reels ($m \geq 1$). The invention seeks to provide an inexpensive system for supervising electromagnetically protected items. To this end, a switching device (10) is fitted which reduces the outputs of the (2.n) receiving devices (4) to n outputs.
