Abstract (en)

[origin: DE19840917C1] The arrangement has a transport roller (14) arranged in a franking and/or addressing machine (1) immediately after a conveyor belt (12), at the same height as the belt and rotating faster than the belt. A lower lying sliding region follows the transport roller in the transport direction. The orthogonal distance of the transport roller from a printer is greater than the longest print to be expected.
