Abstract (en)

Device for facilitating the parking of a motor vehicle in a relatively narrow garage comprises a self-propelled horizontal platform (1) to be positioned on the floor (100) of the garage (9) to support the front wheels (66) of a motor vehicle (6), and provided with a remotely controllable operating system (3, 4) which causes the platform (1) to slide parallel to itself along the longitudinal axis of the garage (9) between a first position situated at the entrance to said garage (9) and a second position situated in proximity to the rear wall of the garage (9). <IMAGE>
