Abstract (en)

[origin: EP0985794A2] The drive has a resetting device in the drive housing biased when the door is opened or closed. A force-transferring rod linkage (33) supported in a rotary bearing and connected to an output member is mounted freely rotatable or or near the output member (32). A closing lever (5) is connected rotationally secured to the output member and can be fixed with a fixing device (6). The closing lever has an entrainment stop interacting with the rod linkage during opening and closing. The fixing device has electromagnet or piezoelectric element.
