Abstract (en)

[origin: US6618961B1] A device for fitting onto a foot and ankle of a human body which is a thermoformable element suitable for being thermoformed onto the foot. This element includes a first part and a second part which are joined together in an edge-edge relationship. Each of the first and second parts is formed of a sheet of thermoformable material. The sheet of the first part has a different thickness or density than the sheet of the second part. The first part extends over the foot and the second extends around the ankle. A third part can be joined in edge-to-edge relationship to the first and second parts and extends over the top of the foot.
